

## PMC's New Capabilities

PMC's Cardiopulmonary Department has the new Platinum Elite Pulmonary Function Machine and the NIOX VERO.

We can perform complete Spirometries, Lung Diffusion, Plethysmography, Nitrogen Washout, MIP/ MEP and MVV and FENO Testing to test for lung inflammation.

Our experienced Cardiopulmonary team can perform PFTs on patients ranging from 4-95 years old, with no weight limit.

## What are PFTs?

Pulmonary function tests (PFTs) are noninvasive tests that show how well the lungs are working. The tests measure lung volume, capacity, airway resistance, rates of flow, and gas exchange. This information can help your healthcare provider diagnose and decide the treatment of certain lung disorders.

PFTs may be used to check lung function before surgery or other procedures in patients who have lung or heart problems, smokers, or who have other health conditions.

Another use of PFTs is to assess treatment for asthma, emphysema, and other chronic lung problems.

- **Complete capabilities for better patient care.**

- **Faster, more accurate testing**

- **Compliant with ATS/ERS and HIPAA Standards**
